I. INTRODUCTION

This Community Relations Plan (CRP) was prepared to provide guidance to the project team as it implements community outreach and education during RCRA Corrective Action activities at the Ferro Corporation facility at 7050 Krick Road, Walton Hills, Cuyahoga County, Ohio. These activities are being completed under the Administrative Order on Consent (Docket No. RCRA-05-2011-0018) established between the United States Environmental Protection Agency (U.S. EPA) and Ferro in September 2011. This CRP details specific activities that will be completed to gather and disseminate information to the Walton Hills community in the vicinity of the facility and to ensure public involvement as the conditions at the property are evaluated and potentially remediated (if needed). In addition, the plan identifies a framework for addressing possible community concerns related to environmental conditions and issues that may arise from potential remediation of the property (if needed). The plan consists of the following sections:

- Description of the property
- Community information
- Public involvement to date
- Potential public concerns
- Objectives of the CRP
- Community relations activities
- Implementation schedule

II. DESCRIPTION OF PROPERTY

A. Property Background and Description

Prior to Ferro acquiring the site, the property was owned by Chase Dryer, a company who manufactured chemical paint drying additives. In the 1940s, Ferro acquired the majority of the property from Chase Dryer and began operations on December 15, 1944. By 1981, Ferro operations included manufacturing additives for the plastics and paint industries and included organo-metallic compounds used as thermal stabilizers for PVC plastics, organic and organo-metallic UV-light stabilizers for plastics, epoxidized vegetable oil plasticizers for plastics and organo-metallic paint driers. In 1990, operations at the Site consisted of:

- Non-hazardous oxidation of soybean oil with hydrogen peroxide
- Production of cadmium, barium, and zinc stabilizers for floor tile and linoleum
- Stabilizers for pliable plastics like vinyl seat covers and includes cadmium, barium, and zinc stabilizers.

In 1992, the operation of manufacturing additives for the paint and plastics industry was continuing. The operation now included the use of alkyl and aryl phosphates, metal salts and metal oxides and various other organo-metallic compounds. Presently, Ferro manufactures polymer additives for a wide range of applications including adhesives, antimicrobials and wire and cable.

B. Current Regulatory Status

On September 30, 2011, U.S. EPA and Ferro entered into an Administrative Order on Consent (Docket No. RCRA-05-20110-0018) under Section 3008(h) of the Solid Waste Disposal Act, commonly referred to as the Resource Conservation and Recovery Act of 1976 (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. In accordance with the Administrative Order on Consent, Ferro agreed to complete certain activities necessary to identify and define the nature and extent of releases of hazardous wastes and/or hazardous constituents at or from the site.

U.S. EPA completed a Preliminary Assessment/Visual Site Inspection (PA/VSI) Report on January 24, 1992. The PA/VSI identified 10 SWMUs at the site. A subsequent site visit was conducted by U.S. EPA Project Manager, Mr. Chris Black, on August 11, 2010 where, according

to the Draft Administrative Order on Consent, the current Solid Waste Management Units (SWMUs) were assessed and five new SWMUs were identified.

Ferro plans to evaluate and/or otherwise identify the nature and extent of any releases of hazardous waste and/or hazardous constituents at or from the facility. Following completion of the sampling activities, human health and environmental risk assessments will be completed. If corrective measures are deemed necessary following these analyses, construction and implementation of the remedial activities will occur. The Administrative Order on Consent requires Ferro to submit its final Corrective Measures Proposal to U.S. EPA by June 30, 2014.

This CRP was prepared as a required document listed in the Consent Order and will be submitted to U.S. EPA for review. Specifically, item VI.18. of the Consent Order states that "U.S. EPA will provide the public with an opportunity to review and comment on its proposed final corrective measures" Item VI.20.a. of the Consent Order states that "Ferro will establish a publicly accessible repository for information regarding site activities, and shall develop and submit by December 31, 2011, a plan for U.S. EPA review and approval for public outreach and involvement activities."

A list of the project team members is included in Appendix A-1. The U.S. EPA contact involved in this project is listed in Appendix A-2. Appendix B includes project area maps.

III. COMMUNITY INFORMATION

A. Community Profile

The Village of Walton Hills was created in 1951 when Bedford Township as a government ceased to exist and three villages were formed from the remaining areas (villages of Walton Hills, Bedford Heights and Oakwood). The village encompasses seven square miles and is bordered by several communities.

- West: Village of Valley View
- East: Village of Oakwood
- South: Village of Northfield and Township of Sagamore Hills (Sagamore Road to the south of the village is the county line between Cuyahoga and Summit Counties)
- North: Cities of Bedford and Maple Heights and the Metroparks system

The Village of Walton Hills is a semi-rural planned community. Village officials are the mayor, six councilpersons-at-large, chief of police, fiscal officer, building inspector, and a street commissioner. A working contractual agreement with the Oakwood Village Fire Department serves the fire-fighting requirements of the village and provides emergency medical service to the residents. Approximately three square miles of the Cuyahoga Valley National Park property are within the village. A list of the local, state and federal elected and appointed public officials representing this project are included in Appendix A-3.

B. Census and Demographic Profile

The Ferro Corporation Walton Hills facility is located within the Village of Walton Hills, 44146 zip code, U.S. Census Bureau Tract 1941, Cuyahoga County, Ohio. According to Census 2010, the total population for the Census Tract, which comprises the whole village, is 2,281. Census 2010 results showed that 96.3% of the homes in this tract are owner-occupied. The median age of village residents is 55.4 years old. Ninety-two percent of the population 25 years and older graduated from high school or higher educational institution and 97.7% of the residents age five and older speak English as their primary language at home.

C. Project Stakeholders and Neighbors

The following stakeholders could have an interest in site investigations and potential remedial plans and cleanup efforts (if needed) at the property. Ferro will keep interested parties and

neighbors informed of RCRA-related activities. Efforts will be made to involve stakeholders, and any newly identified stakeholders, throughout this process. The project team will request stakeholder input on this project and will seek suggestions on outreach activities and other issues as appropriate.

We currently anticipate conducting initial project communication activities primarily through public notices in the local newspaper and village newsletter and a document repository at the Southeast Branch of the Cuyahoga County Public Library System. Bona fide citizens and organizations requesting placement on the interested stakeholders list will be added to this CRP and will be provided status updates throughout the RCRA-process. If corrective measures are determined to be necessary, additional communications strategies may be implemented that will be directed toward Ferro employees, public officials from the Village of Walton Hills, interested stakeholders, and project area neighbors. Under the corrective measures scenario, public officials; interested stakeholders; and landowners and businesses near the facility will receive project updates and meeting invitations. Appendix B-2 shows the outline of the anticipated location of businesses and landowners that would be included on this close neighbors list. The neighbors list will be prepared just prior to mailing the notices to ensure the most accurate list.

Ferro Employees

Many of the employees working at this facility live in and near Walton Hills and are active in the schools, churches and a variety of community organizations. RCRA-related information will be shared with employees so that they can pass on relevant information to their friends, neighbors, and relevant organizations throughout the community.

Village of Walton Hills Public Officials

Because this is such a small community, informing village leadership of project plans and requesting their assistance with sharing information with local residents and businesses through their web site and through meeting announcements or village publications could be helpful. The Oakwood Village Fire Department provides firefighting and emergency services for Walton Hills and they will be notified of certain project activities as well. A list of village leaders is in Appendix A-3. We will add any additional officials to this plan when they are identified.

Interested Citizens and Interest Groups

This plan includes a few local organizations that we anticipate may be interested in the RCRA-related process. As we become aware of additional bona fide citizens or groups that are interested in the project as a result of this community relations process, or any other Ferro operations or outreach activities, we will add their contact information in Appendix A-4 in this plan and will include them in the direct mailings and other outreach activities.

Neighboring Landowners, Businesses and Residents

The project is located primarily in an industrial area. There are several manufacturing facilities to the north, south and east, privately-owned wooded areas followed by residential properties to the west, and a residential development to the northeast beyond the railroad tracks and State Route 8. A mailing list for each neighbor within the boundary shown in Appendix B-2 will be prepared for certain RCRA-related corrective measures notices.

Southeast Branch of the Cuyahoga County Public Library System

The Southeast Branch Library serves as a common meeting place for organizations and provides a convenient location for neighborhood residents to learn and gain access to the library's great collection of materials. The Southeast Branch has an 80-seat public meeting room with kitchen and a 10-seat meeting room for local non-profit groups to reserve. It serves the Bedford, Bedford Heights, Oakwood Village, and Walton Hills communities. This will be the location of the public repository.

IV. PUBLIC INVOLVEMENT TO DATE

To date, no RCRA-related public outreach activities have been completed, but many relationships exist between Ferro employees and local officials and stakeholders. Ferro environmental health and safety officers have worked with the Oakwood Village Fire Department on certain occasions and plan to continue to have positive and proactive relationships with these officials throughout this RCRA-process. Ferro employees receive company news and updates through the FerroConnect Intranet site and postings on bulletin boards in break rooms.

V. POTENTIAL PUBLIC CONCERNS

A. Potential Public Concerns

Depending on the outcome of the environmental investigations and risk assessments, we understand that there could be public concerns with potential human health and environmental risks associated with the environmental conditions at the property. If corrective measures are required, the project team is aware that property cleanup activities could pose short-term impacts or inconveniences to project neighbors. Truck traffic, dust, and noise could be an issue. These potential public concerns are further addressed below.

1. Environmental Conditions at the Property

Results of the environmental evaluation and investigation, and any subsequent sampling activities and risk assessments, may identify impacted soil and groundwater and exposure pathways to human or environmental receptors. Results of the environmental investigations and risk assessments will be shared with the public in a manner that is readily understandable and reflective of the true impacts and risks (if any) associated with site conditions. If immediate threats to public health and safety or the environment are identified during this process, Ferro will work with U.S. EPA to complete any interim actions to address unacceptable exposure.

2. Issues Associated with Active Remediation Activities

Because the site is surrounded by industrial facilities, Ferro does not expect any significant inconveniences. To the extent that these businesses could experience some inconveniences associated with active remediation work (if needed), such could include:

Truck traffic - All trucks will likely enter and exit through the same point of access, and all efforts will be made to reduce congestion in the flow of traffic on and off the property. The contractors will be required to submit a traffic plan to be approved by Ferro's consultants to ensure that there is not a long line of trucks and to minimize idling.

Dust - A dust suppression control plan will be in place to minimize dust on-property during any soil removal activities. Water will be used on excessively windy days to prevent dust from blowing. If determined to be necessary, the team will coordinate street sweeping activities.

Noise - Heavy machinery is typically in operation from approximately 7:30 a.m. to 6 p.m. Monday through Friday during active excavation phases of remediation projects. Weekend work may be conducted. An effort will be made to minimize certain activities if there are planned events in the area.

VI. OBJECTIVES OF COMMUNITY RELATIONS PLAN

The following objectives are incorporated into Ferro's community relations planning and implementation efforts:

- Provide a project representative to serve as a point of contact for the community;
- Provide timely information to the community during the overall RCRA process;
- Provide opportunities to obtain public input and comments during significant decision-making milestones of the RCRA process and, if necessary, the corrective measures planning and implementation phases of the project; and
- Prepare and distribute/post fact sheets and other forms of communication to keep the public updated on property investigations and potential cleanup progress.

VII. COMMUNITY RELATIONS ACTIVITIES

This section describes the way in which the public will be involved with the implementation of this action plan. These public involvement activities include required activities as well as other activities intended to establish open communications with the community, address community concerns, and implement the objectives established for the public involvement program. As outreach materials are prepared, they will be inserted in Appendix C.

A. Project Contact for Public Involvement Activities

Jenny Carter-Cornell

Director of Funding and Government & Community Relations

Hull & Associates, Inc.

3401 Glendale Avenue, Suite 300

Toledo, Ohio 43614

jcornell@hullinc.com

Phone: (440) 232-9945 (local number for Cleveland-area office)

Jenny Carter-Cornell will be the first point of contact for all public involvement activities associated with this project. She will respond to community interests and requests for information and will designate other appropriate personnel and contacts to respond accordingly. Her primary support for these efforts will be leaders at Ferro Corporation and Hull & Associates, Inc.

B. Planned Community Relations Activities

Ferro plans to complete the following community relations activities:

- 1. Establish and Maintain a Public Repository.** Establishing this repository provides readily-available information to the public to ensure meaningful participation. RCRA-related documents will be placed in a public repository at the Southeast Branch of the Cuyahoga County Public Library System beginning in the first quarter of 2012 and until the completion of RCRA activities as determined by U.S. EPA. Ferro will place in the repository copies of documents that are submitted for agency review and/or public comment and any additional information or documents that are deemed necessary by U.S. EPA and Ferro.

Repository Location:

Southeast Branch
Cuyahoga County Public Library
70 Columbus Road
Bedford, Ohio 44146-2836
(440) 439-4997
Branch Manager: Jeanne Sapir

2. **Complete Public Notification Activities.** Legal notices will be published in *The Plain Dealer* notifying the public of the placement of the Administrative Record documents in the public repository, public comment periods, and for any public meetings. *The Plain Dealer* is the most widely distributed local newspaper in the area and the notice will be published in the Classified Section under Special Notices. A notice will also be published in *The Walton Hills Owl*, a monthly non-political publication prepared by the Village that prints civic and social news of general interest to the residents of Walton Hills.
3. **Prepare and Maintain Mailing Lists.** Ferro will maintain the postal and electronic mailing lists of public officials and bona fide citizens and citizens groups that are identified in this plan or that express an interest in this project and request to be placed on this list. If corrective measures are determined to be necessary, Ferro will prepare a mailing list for close neighbors identified in Appendix B-2 for direct mailings.
4. **Prepare and Distribute Project Notices, Fact Sheets and Summaries.** If corrective measures are determined to be necessary, the project team will produce public notices and fact sheets. Mechanisms for hard copy and/or electronic material distribution could include direct mail; postings at the Southeast Branch Library, Village Hall and Ferro bulletin boards; publication in *The Walton Hills Owl*; and placement on web sites (potentially the village web site and/or a project-specific web site). These communications will give reasonable advanced notice of major activities and will summarize remediation efforts and other information in a clear and easy format. Upon request, copies

could be made available for distribution at any meetings of organizations identified in this remediation and outreach process.

5. **Provide Opportunities for Public Comments.** Ferro will establish public comment periods for certain RCRA documents that could include the draft corrective measures plan, interim response actions and interim measures, and the draft final remedy construction completion report. During the appropriate public comment periods, all documents subject to public comment will be placed in the public information repositories. A response to comments will be prepared at the conclusion of the public comment period and any public meetings conducted. The comments and response to comments will be made available for public review at the public repository location and upon request.
6. **Conduct Public Meetings.** In an effort to provide timely information to the public about cleanup activities (if deemed necessary), Ferro will conduct at least one public meeting, likely during the public comment period for the Corrective Measure Plan, to explain the plan and to gain public comments, input and recommendations about this project for consideration by the project team to adjust any remediation plans. Ferro will prepare a written summary of the public meeting for U.S. EPA's review and once final, the summary will be made available in the public repository.

The team may identify the need to hold additional informational meetings in the community during the investigation and remediation processes to share project updates and gain public input. Sessions could be designed to accommodate small and large community groups and would likely be held at the facility or the Southeast Branch Library.

7. **Respond to Media Inquiries.** Ferro will ensure timely responses to requests from reporters for information about investigation and remediation efforts. A list of the local media outlets is included in Appendix A-5.

VIII. IMPLEMENTATION SCHEDULE

The activities outlined in this CRP will be completed throughout the RCRA process. As this process moves forward, specific community relations activities will be addressed in accordance with this CRP. Ferro will coordinate community outreach efforts as necessary throughout the investigations and any cleanup activities to keep stakeholders informed of activities and progress, and to afford the public the opportunity to provide input.

Ferro established a publicly accessible document repository in December 2011. Ferro anticipates placing documents in the public repository beginning the first quarter of 2012. Ferro will have a legal notice published when the initial documents are placed in the repository. Ferro will continue to add organizations and citizens to the master contacts list/ mailing list upon the expression of interest or request.

If corrective measures are determined to be necessary, additional public outreach activities may be implemented. To the extent that additional activities are necessary, they will likely be directed to Ferro employees, public officials from the Village of Walton Hills, interested stakeholders, and project area neighbors. Ferro's final Corrective Measures Proposal to U.S. EPA is due by June 30, 2014; therefore, we anticipate the draft public comment period, public notification activities and public meeting to discuss the draft plan to be completed sometime in the spring 2014. Final proposed timelines and dates for this outreach work, and any subsequent activities, will be refined and shared with U.S. EPA closer to the project implementation period.
